GreenLine GL-1 main board (netlist stage, nothing routed)

mcu

19 parts: C1 … Y1

File: gl1_main_mcu.kicad_sch

camera

20 parts: C14 … U3

File: gl1_main_camera.kicad_sch

power

32 parts: BT1 … U11

File: gl1_main_power.kicad_sch

sensor

4 parts: C30 C31 R20 U4

File: gl1_main_sensor.kicad_sch

display

4 parts: C32 J1 R21 R22

File: gl1_main_display.kicad_sch

grain

28 parts: C33 … R31

File: gl1_main_grain.kicad_sch

service

1 parts: J2

File: gl1_main_service.kicad_sch

108 parts (105 on the BOM; plus 9 board-only item(s) such as fiducials), 96 nets, 4 copper layers, 0.80 mm, rule set GL1_4L_0.10mm
Net classes (track / clearance, mm):
    Default   0.150 / 0.127   59 nets
    CamPower   0.150 / 0.100   3 nets
    Fine   0.100 / 0.100   28 nets
    Power   0.300 / 0.127   6 nets
Plane: GND on In1.Cu
Plane: V2V8 on In2.Cu (shared with routing)
Every pin carries a global label with its net name; pins without a net carry a no-connect flag.
This schematic is generated from the design script (netlist as code). Edit the script, not these files.

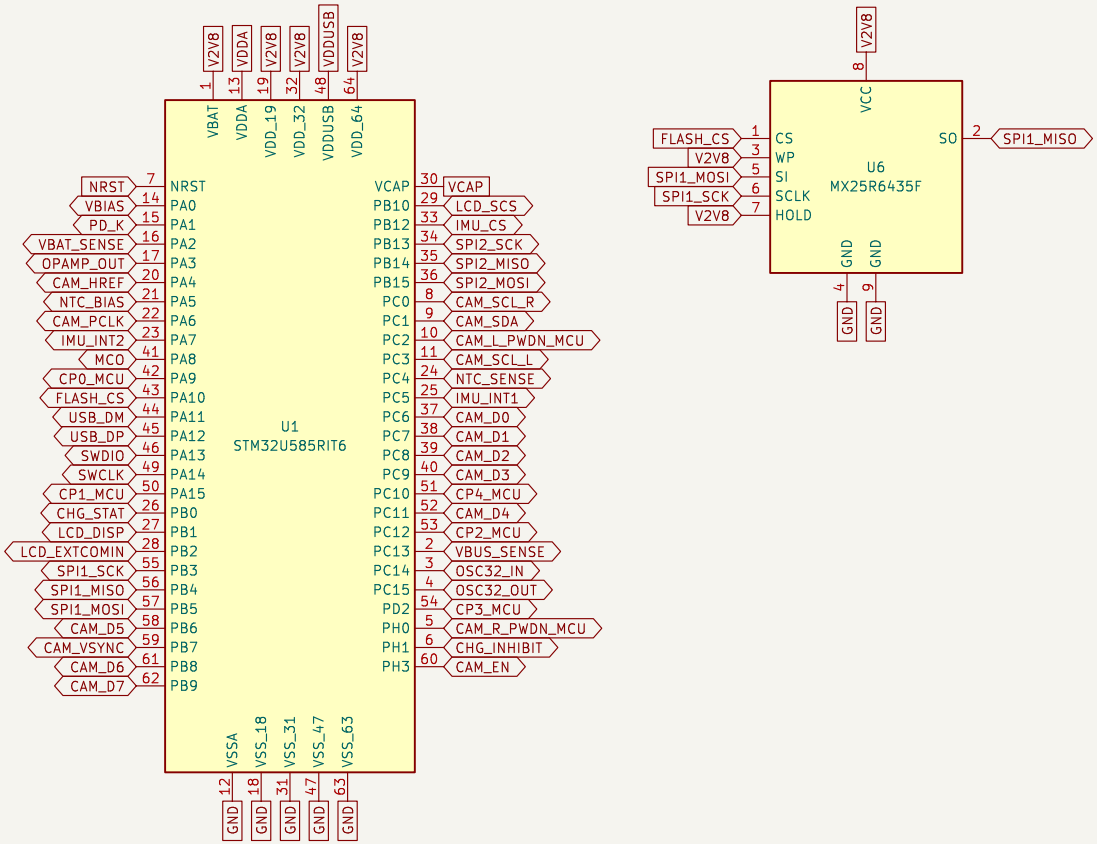

(netlist stage, nothing routed)
Connectivity is by global label; there are no wires
Generated by gleda from the design script — do not edit
