GreenLine GL-1 DEMO (toolchain proof, not the product circuit)

mcu

19 parts: C1 … Y1

File: greenline_demo_mcu.kicad_sch

camera

14 parts: C13 … U3

File: greenline_demo_camera.kicad_sch

sensor

6 parts: C21 … U5

File: greenline_demo_sensor.kicad_sch

power

24 parts: BT1 … U11

File: greenline_demo_power.kicad_sch

display

3 parts: C36 J1 R19

File: greenline_demo_display.kicad_sch

grain

27 parts: C26 … R18

File: greenline_demo_grain.kicad_sch

service

1 parts: J2

File: greenline_demo_service.kicad_sch

94 parts (91 on the BOM; plus 6 board-only item(s) such as fiducials), 72 nets, 4 copper layers, 0.80 mm, rule set US_4L_FINE
Net classes (track / clearance, mm):
    Default   0.150 / 0.127   45 nets
    CamPower   0.150 / 0.090   3 nets
    Fine   0.090 / 0.090   18 nets
    Power   0.300 / 0.127   6 nets
Plane: GND on In1.Cu
Plane: V2V8 on In2.Cu (shared with routing)
Every pin carries a global label with its net name; pins without a net carry a no-connect flag.
This schematic is generated from the design script (netlist as code). Edit the script, not these files.

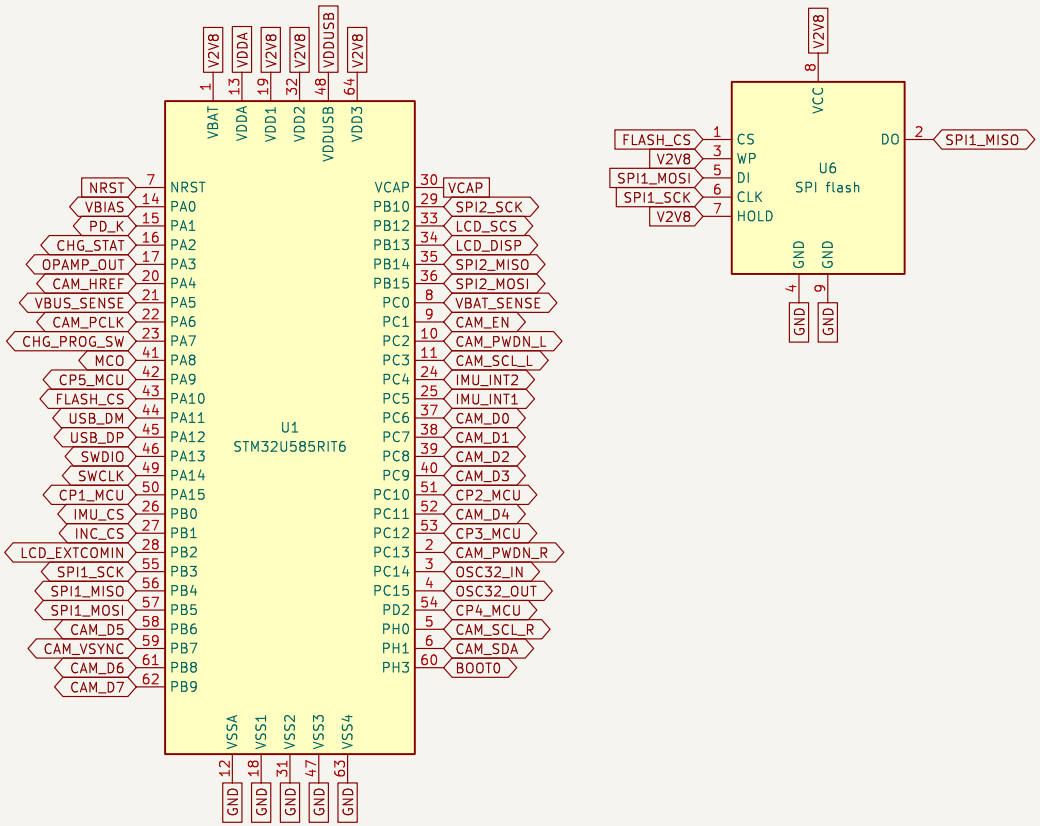

(toolchain proof, not the product circuit)
Connectivity is by global label; there are no wires
Generated by gleda from the design script — do not edit
